

1. 2016-1a

Circle or cross: "T" if True – "F" if False.

- T** / **F** A clustered system can provide high-availability service.
- T** / **F** The advantages of a multiprocessor system include: increased throughput, economy of scale, and increased reliability.
- T** / **F** Android (Google) features middle-ware that supports (for example) Linux.
- T** / **F** Microsoft Windows 10 provides only a GUI (Graphical User Interface) with no CLI (Command Line Interface).
- T** / **F** Using the Windows Application Programming Interface (API), you can compile the same source code to run natively on either 32-bit Windows or 64-bit Windows.
- T** / **F** Linux does not provide any Application Programming Interface (API).
- T** / **F** Most modern operating systems – including Linux and Windows – have a kernel structure similar to that of a micro-kernel, but to implement that structure in the manner of a monolithic kernel.

2. 2016-1b

Circle or cross: "T" if True – "F" if False.

- T** / **F** Virtual Machines are fully isolated from one another no Virtual Machine is aware of the presence of another Virtual Machine.
- T** / **F** With containers, a host operating system is installed on the system first, and then a container layer is installed atop the host Operating Systems.
- T** / **F** Software as a Service (SaaS) is a software stack ready for application use via the Internet (i.e. a database server).

3. 2016-2a

Circle or cross: "T" if True – "F" if False.

- T** / **F** An Operating System is a software that manages the computer hardware (OSCE2).
- T** / **F** The purpose of an Operating System is to provide an environment in which a user can execute programs in a convenient and efficient manner (OSCE2).
- T** / **F** There are at least three types of programs, the kernel, system programs, and application programs (OSCE2).
- T** / **F** Most prominent mobile Operating System features a core kernel along with middle-ware that support Data Base, Multimedia, Graphics, etc (OSCE2).
- T** / **F** The Interrupt is a privilege instruction.
- T** / **F** After interrupt, the system will be in non-privilege mode.

4. 2016-2b

Answer the following questions:

- (a) Name the three most common operating systems for personal computers!
- (b) Name the two most common operating systems for mobile devices!
- (c) A 64-bit DDR3 memory system has two transfers per cycle of a quadrupled (4x) clock signal. What is the transfer rate (in Mega-Bytes/second) if the memory clock-rate is 200MHz?
- (d) If the signal propagation is 300 000 km/s. How long (cm) is the wave-length of a 3GHz signal?

5. 2016-2c

- (a) Fill this following with "ASP" (Application Software Provider) or "SaaS" (Software as a Service)

	a separate instance of the application is maintained for each business
	always Up-to-Date for the whole service
	closer to Legacy Software
	lacks scalability for the vendor
	supports multi-tenancy (multiple customers)

- (b) Fill this following with "IaaS" (Infrastructure as a Service), "PaaS" (Platform as a Service), or "SaaS" (Software as a Service)

	CRM System
	Database Server
	GMAIL
	Google Apps
	Network
	Office 365 (Microsoft)
	Servers
	Storage
	Virtual Machines
	Webserver

- (c) Fill this following with "Container", "Full Virtualization", "Hypervisor", or "Para Virtualization"

	a complete simulation of the underlying hardware
	creates and runs virtual machines
	guests run a modified operating system
	LXC
	operating-system-level virtualization

6. 2017-1a

Circle or cross: "T" if True – "F" if False.

- T** / **F** The von Neumann architecture describes a computer architecture with parts consisting of a Central Processing Unit (CPU); a Control Unit (CU); a Memory to store both data and instructions; external Mass Storage; and Input and Output mechanisms.
- T** / **F** An Operating System provides protected access to shared resources (UCB162).
- T** / **F** A program is an instance of a process that runs (UCB162).
- T** / **F** AMD64 (aka x64 or x86_64) is the 64-bit version of the x86 instruction set.
- T** / **F** An Operation System acts as an intermediary between the computer user and the computer hardware (OSC9).
- T** / **F** An Operating System as resource allocator manages the ~~execution of user programs to prevent errors and improper use of the computer~~ (OSC9).
- T** / **F** Android Operating Systems ~~includes Linux as middleware.~~
- T** / **F** "Kernel mode" is also called "Supervisor mode" whereas "User mode" is also called ~~"Privileged mode".~~
- T** / **F** System calls provide an interface to the Application Programming Interface (API).
- T** / **F** API specifies a set of functions that are available to an application programmer, including the passing parameters and return values.

7. 2017-1b

Circle or cross: "T" if True – "F" if False.

- T** / **F** If you use services like Facebook or GMail or Twitter, then you already use the cloud system.
- T** / **F** One of the **essential** Cloud Computing characteristics is "On Demand Self-Service".
- T** / **F** Amazon Elastic Compute Cloud (EC2) is an ~~Electronic Commerce / Internet-based Retailer system.~~
- T** / **F** Organizations today have no choices: all technology-enabled business processes will be moved to the cloud.
- T** / **F** A disadvantage of Cloud Computing is that it requires a constant network connection.
- T** / **F** **OpenStack** is a software platform, mostly deployed as an Infrastructure-as-a-Service (IaaS).
- T** / **F** A **Hypervisor** is computer software, firmware, or hardware, that creates and runs virtual machines.
- T** / **F** There are three main Cloud Computing components: grid computing, utility computing, and autonomic computing.
- T** / **F** Cloud computing is ~~always public~~ cloud by definition.
- T** / **F** ~~Any conventional OS distribution can be run on top of a paravirtualizing Hypervisor.~~

8. 2017-2a

(01) is a software that manages the computer hardware. Android is an open source (02) for (03) that includes a (04) kernel, (05), and key (06). A (07) is any hardware or software used to host an application or service. Anything between the kernel and user applications is considered as (08). A (09) is an abstraction in which common code providing generic functionality. (10) provide an interface to the services made available by an (11). The (12) specifies a set of functions that are available to an application programmer.

Match the number of the sentence above with these following phrases:

[]	Application Programming Interface (API)	[]	Applications	[]	Linux-based
[]	Middleware	[]	Middleware	[]	Mobile Devices
[]	Operating System	[]	Operating System	[]	Platform
[]	Software Framework	[]	Software Stack	[]	System Calls

9. 2017-2b

- In the von Neumann architecture, the **Central Processing Unit** consists of two main parts: the (01) and the (02).
- A (03) is a collection of **instructions**, while a (04) is the actual execution of those **instructions**.
- One **Hexadecimal** digit represents (05) binary bits, whereas one **Octal** digit represents (06) binary bits.
- A (07) uses a **Page Table** to map (08) **numbers** of (09) **memory** into (10) **numbers** of (11) **memory**.
- The most common use of (12) is **printing**. A (13) is a component that **stores data** so future requests for that data can be served **faster**. A (14) is used **temporarily** store data while it is being moved from one place to another.
- (15) means simultaneous or concurrently execution of **multiple processes**.
- The **three-state process** model is constituted of (16), (17), and (18).
- If a process is unable to change its state **indefinitely** because the (19) requested by it are being used by another waiting process, then the system is said to be in a (20).

Match the number of the sentence above with these following phrases:

[]	Arithmetic Logic Unit	[]	buffer	[]	cache	[]	computer program
[]	Control Unit	[]	deadlock	[]	four (4)	[]	frame
[]	Memory Management Unit	[]	multitasking	[]	page	[]	physical
[]	process	[]	ready	[]	resources	[]	running
[]	spooling	[]	three (3)	[]	virtual	[]	waiting
